

TACOFLOW2 ELINK

HEATING CIRCUIT PUMPS

Glandless circulator pumps for hot water heating systems in residential and commercial buildings.

DESCRIPTION

The TacoFlow2 eLink is driven by permanent-magnet synchronous motors. These innovative motors achieve a high efficiency at low operating costs. They are maintenance-free and do not need replacement of seals and gaskets.

INSTALLATION POSITION

The pump can be installed both horizontally or vertically. The arrow indicating the medium's flow direction must be observed.

ADVANTAGES

- eLink: Wireless communication between circulation pump and smartphone/tablet
- Additional, finer adjustment options
- Technical information shown on the display
- Efficient output setting through activeADAPT function, variable $\Delta p-v$ proportional pressure curve, constant pressure curve $\Delta p-c$ or fixed min./max. speed
- Insulation shell supplied as standard
- A colour LED indicates the current operating state
- 5 year guarantee

OPERATION

The circulation pump are of a glandless design, since the rotating parts of the motor run inside the pumped medium. This provides lubrication for the motor and the rotating parts. The circulation pump is equipped with anti-blocking protection, since the high efficiency pumps no longer have a pump head screw for manual unblocking. They also feature an automatic venting function, which detects and indicates any air in the pump.

BUILDING CATEGORIES

- Apartment blocks, single family dwellings, housing estates, multiple dwelling units
- Smaller public buildings
- Hotels and restaurants, industrial kitchens
- School buildings and sports facilities
- Office, commercial and industrial buildings
- Facilities with partial use, such as barracks, camping sites
